Solution for mobile user.

MOS Player meets the need of users to run their eLearning courses off-line.

Mos Player is a Windows application delivered with MOS Chorus to run courses locally.

You can configure MOS Player to play the courses and read the latest announcements from your MOS Chorus. You can download courses and import them into MOS Player.

If you run a course locally, your progress data is saved on your computer and can be sent back to the MOS Chorus server (synchronisation).

MOS Player is an executable program (.exe) to install on your computer. It is delivered with a getting started aid.

Technical configuration MOS Player

Windows XP or Windows Vista.

Administrator rights during the installation.

On Windows XP SP2 or Vista, the option "Allow active content to run in files on My Computer" must be activated.

Disable pop-up blocking in the Local Machine area. At startup a message can indicate that Windows can't run the file MosPlayer.hta.

You have to select the program c:\windows\system32\mshta.exe to associate HTA files with mshta.exe.
