

# Solution for implementing fee-paying training paths

**Offers online payment functionalities for access to training programmes.**

This extension enables administrators to propose fee-paying training paths to users. Users can then register and pay the required amount online. Payment is carried out via PayPal, the online payment service, which also accepts credit and debit cards.

- **Easy to use**

Administrators can define access restrictions easily, such as start and end dates, time slots, prices, or access limited to a specific number of hours, days or participants.

- **For users**

Users can access the catalogue and choose their fee-paying course. They are then redirected to the PayPal website. Once payment is made, the training programme is automatically made available in MOS Chorus.

**Smart Learning Solutions**
