Solution for multi-user workstations

You can inform and train your teams that work on one single workstation and have a very limited access to Internet!

MOS Player Multi-Users lets your learners follow their training modules in offline mode on a shared workstation and facilitates their progress monitoring.

● Comfort for learners

Your learners follow their training modules, read the latest announcements, and save their progress on shared workstations, at their own pace and according to their schedules.

● Ease of use for training managers

You can manage users and content either locally or on the LMS platform MOS Chorus.

MOS
Player
Multi-users

● Quick installation

Install locally on the workstations your content, from the LMS platform MOS Chorus or using removable media.

● Data centralization

Synchronize in just one click your users' progress and their results, once your reconnect with MOS Chorus.

Solution for multi-user workstations

MOS Player Multi-Users supports the offline learning needs of users on a single instance.

We have designed the multi-user extension of our MOS Player, to extend the benefits of our offline training content player to those who do not have their own personal workstation.
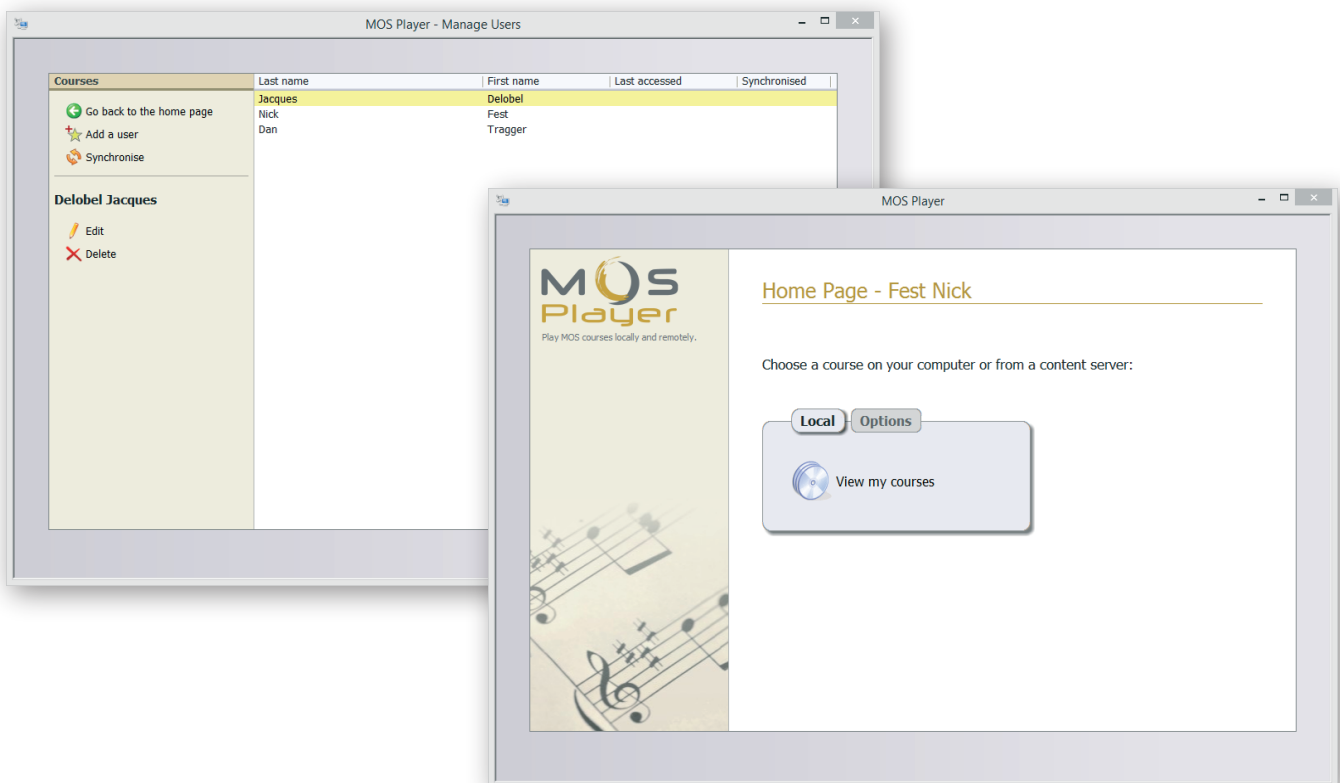

MOS Player Multi-Users is an executable (.exe) program (Windows application), provided with the LMS platform MOS Chorus. It is installed locally on a computer and comes with a getting-started support.

With MOS Player Multi-Users,

Learners can...

- Access their own user profile on a shared instance
- Follow their training modules without Internet connection
- Pause or interrupt their training at any time and pick up later exactly where they left off
- Monitor their locally saved progress
- Read announcements, blogs...

Training managers can…

- Locally install their modules from MOS Chorus or using removable media (archive *.zip)
- Configure the connection to the corporate LMS platform MOS Chorus
- Locally create users or add them from MOS Chorus
- Enter server's name, URL, training manager's login and password
- Synchronize users' locally saved progress and results with the LMS platform MOS Chorus in just one click
- Manage RSS feeds and subscriptions

Technical configuration MOS Player Multi-Users

Windows XP / Vista / 7
Internet Explorer 6+
Administrator rights at the installation
MOS Chorus 036+ / Content MTR 036+
