

Solution for managing WebEx sessions in MOS Chorus

Facilitates the creation of WebEx virtual classes in the LMS platform MOS Chorus

Simplifies the management of invitations, enrolments and participants

Retrieves automatically the participants' information

- **Time saved on administrative work**

A "Create a session" button is displayed at the group level in MOS Chorus and generates a WebEx session automatically.

A direct link to the WebEx sessions is sent to each participant to log in. Reminder emails are generated in MOS Chorus.

- **Simplicity for the learner**

The user role (tutor / host or learner) is automatically authenticated prior to the user's log in.

The WebEx session is automatically launched on the user interface.

- **Dynamic update of information**

If an administrator or a tutor modifies a piece of information related to a training group (name, start date, duration), the updated information is automatically sent to WebEx.

If a session in MOS Chorus is deleted, it is automatically removed from WebEx.

- **Information automatically retrieved**

Once the virtual classroom is over, participants' information (names, time spent, updated completion report) is automatically sent from WebEx to the LMS platform MOS Chorus.

Available from the 038 version of the LMS platform MOS Chorus
